Application Routes & Navigation Architecture

Complete role-based route specification, access control permissions, screen catalog groupings, and component mappings for Customer, Reseller, Supplier, Driver Logistics, Dropshipper, and Admin modules.

TOTAL ROUTES	USER ROLES	SCREEN GROUPS	STACK
85+	6 Roles	8 Groups	React 19
Mapped in App.jsx	RBAC Protected	Screen Navigator (Ctrl+K)	React Router + Vite

1. System Architecture & Route Security

The MShoppy frontend is structured as a unified multi-role social commerce super-app. Routing is orchestrated in frontend/src/App.jsx using **React Router DOM**. Access control is enforced via the <ProtectedRoute /> wrapper component, which inspects user authentication status and verifies allowed roles (CUSTOMER, RESELLER, SUPPLIER, DRIVER, DROPSHIPPER, AFFILIATE, ADMIN). A global **Floating Navigator** (activated via Ctrl + K or bottom navigation) indexes 8 functional groups allowing rapid navigation and QA audit across the entire application.
